# WMS Market Remains Very Active

## Drivers of New WMS Projects:

- New Facility
- Companies Experiencing Rapid Growth
- Companies Making Significant Logistics Strategy Changes
- Companies Consolidating Facilities
- Companies Significantly Increase DC Automation
- Rising Distribution Costs
- Current WMS Technology is Really Old (“Burning Platform”)
- New Omnichannel Fulfillment Requirements
- Interest in Cloud-based System

# Exciting New WMS Capabilities are Emerging

- 20 Years of Only Incremental Improvement in WMS Capabilities
- Market is Ready for Something New

# Five Exciting New WMS Trends

- WMS in the Cloud
- Use of Templates and Wizards
- Integrated Support for Picking Sub-Systems
- Conversational Voice
- WMS + WES

# #1: WMS Moves to the Cloud

- Despite Late Start, WMS Moving Rapidly to the Cloud
- Gartner: “By 2020, over 90% of Spending on Supply Chain Execution Systems will be for Cloud-based Solutions”
- Underlying Architecture Key to Flexibility
- Cloud, On-Premise, Hybrid
- Smart Mobile, Optimized RF Communications

# Understanding Pricing and Deployment Options

Subscription/ Transaction		
License		
	On-Premise	Cloud

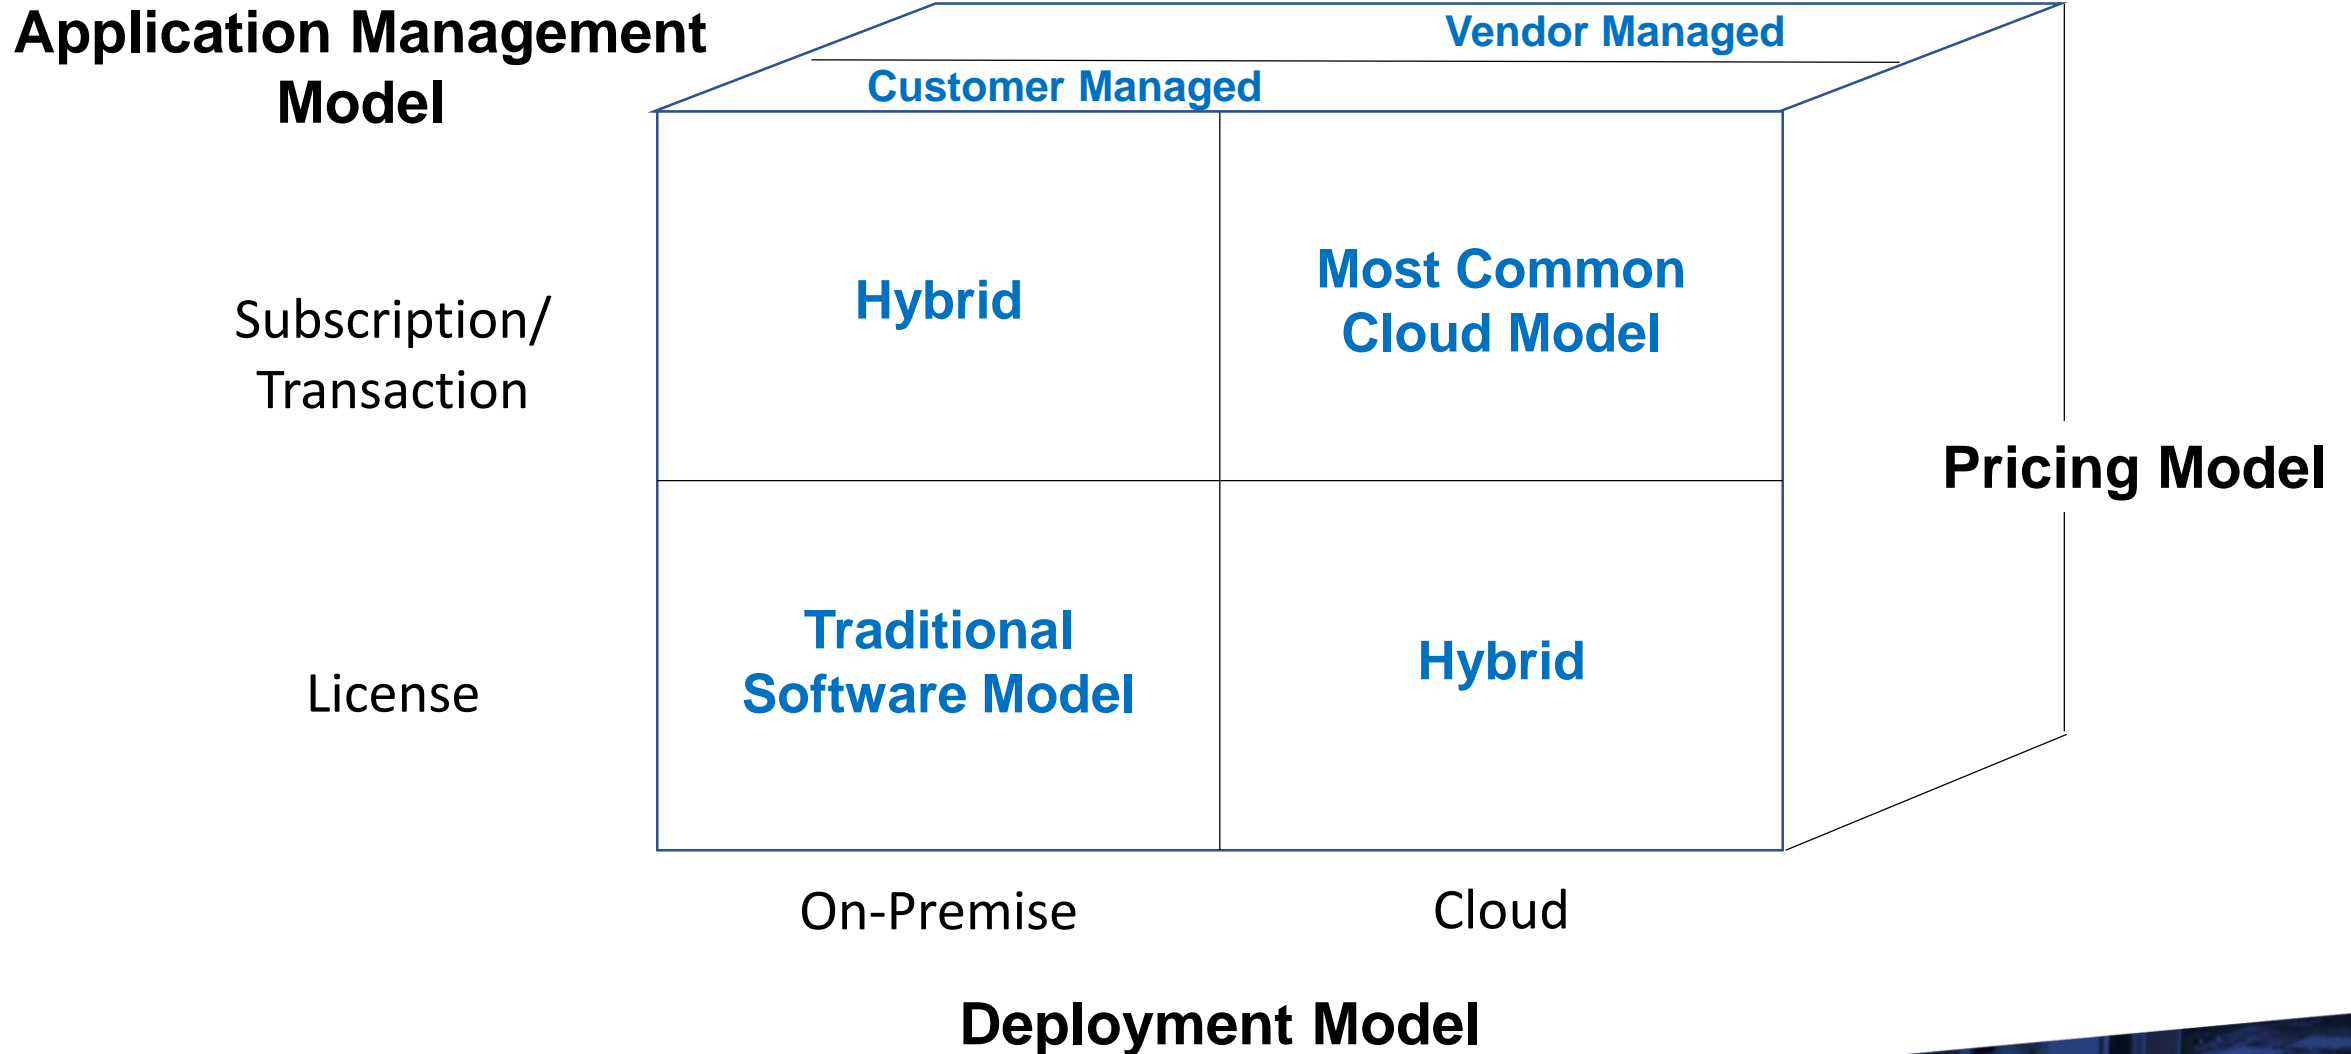

**Deployment Model**

# Understanding Pricing and Deployment Options

# Understanding Pricing and Deployment Options

# WMS Moves to the Cloud

**The Promise: Varied Distribution Network – One WMS Solution**

**Move from On-Premise to Cloud with No Data Migration**

Large DC  
On-Premise

Large DC  
On-Premise

Mid-Size DC  
On-Premise

Mid-Size DC  
Cloud

Small DC  
Cloud

Small DC  
Cloud

Remote DC  
Hybrid

**POWERED BY POSSIBILITIES.**

# WMS Moves to the Cloud

**Support for Hybrid  
Deployment**

# # 2: Use of Templates and Wizards to Transform WMS Deployment

- WMS Deployments Remain Very Difficult, Costly and Risky
- Many WMS Providers have tried Using Templates - Never Worked Very Well
- Now - New Approaches that Not Only Reduce Effort/Costs - Prevent Mistakes

SCFEXLITE 5.3.6

Bootstrap Template Warehouse Management System

**Building Template Features**

Dock Doors ☒ Stage Locations ☒ Zone Setup ☒ QC Locations ☒  
Location Formats ☒ Receiving Docks ☒ Return Locations ☒ User Groups ☒  
Location ☒

**Business Unit Template Features**

**Receipts**

RCV Dock avail. for Order processing ☐ Blind Receipt ☐ PO Receipt ☒ Receive Product not in PO ☐  
ASN Receipt ☒ Overage Allowed ☐ QC Inspection on Receipt ☒

**Inventory Tracking**

FIFO ☒ Serial No. Tracking Inbound ☒ Unit Level Serial No. ☒ Case Level Serial No. ☒  
Lot Code Tracking ☐ Manufacturing Date ☐ Serial No. Tracking ☒ Expiry Date ☐  
Serial No. Tracking Outbound ☒

**Order Processing**

Batch No. Tracking ☒ Outbound QC required ☒ Commercial Invoice ☒ Each Pick Allowed ☒  
Parcel Integration Required ☒ Consolidate Order by Customer ☒ Multi Shipment allowed for an order ☐ Case Pick Allowed ☒  
Packing Slip ☒ Shipping Documentation ☒ Pallet Pick Allowed ☐

# # 3 – Integrated Support for Picking Sub-Systems

- High Interest in a Variety of MHE Technologies
  - High Automation
  - Mid-Level Automation: Voice, Smart Carts, Pick-to-Light, Put Walls, Mobile Robots, etc.
- Current Approach is Limited
  - Throw Orders “Over the Wall” to Sub-Systems, Receive Confirmations Back
  - Limits Flexibility, Optimization and Exemption Handling
- A Better Way has Emerged

# Each Sub-system with its Own Control Software

Voice Server

POWERED BY POSSIBILITIES.

# Each Sub-system with its Own Control Software

# The Better Way

# Example: Robotic Helper Task

**Picker 1**

**Scenario: Piece Picking from Forward Pick Areas Only**

# Example: Robotic Helper Task

Picker 1

1

- Picker Arrives at Pick Location
- Expected Inventory not There
- Cluster Picks for One or More Orders Must be Skipped
- Can be “Short Picked” or Skipped

# Example: Robotic Helper Task

Picker 1

2

- System Generates High Priority Cycle Count
- Associate Confirms Inventory Shortage
- High Priority Replenishment Task is Generated

# Example: Robotic Helper Task

3

- Picker Works on Remaining Picks
- If Complete, Picker Takes Totes to Packing, where Totes with Missing SKUs are Directed to “Hospital” Area

Picker 1

# Example: Robotic Helper Task

Picker 2

4

- Original Picking Location is Replenished

# Example: Robotic Helper Task

5

Picker 2

- Robot Arrives at Original, Now Replenished Forward Pick Location
- As New Picker Approaches Location, He/She is Given a New Task – Pick the Shorted Item and Put on Robot
- Robot Match Confirmation RTLS
- The “New Task Interleaving”

# Example: Robotic Helper Task

6

- Mobile Robot Takes Missing SKUs to Packing Hospital Zone, where they are Packed to Complete the Orders
- Alternatively, Robot Can Meet the Picker in Route if Picks are not Complete

# Substantial Benefits from this Approach

- Use of Commodity Hardware for Carts, Walls and Lights Reduces Costs by as Much as 70%
- Put in your pocket, or add more carts/walls/light systems
- Use of Smart Phones and Voice App Saves Thousands of Dollars Per Unit
- Elimination of Interfaces to 3<sup>rd</sup> Party Software Simplifies Implementation and On-Going Maintenance, Reduces Costs
- Advanced Order Planning and Dynamic Release Drives Double Digit Productivity Gains
- Integrated Picking and Packing System Provides Operational Flexibility
- Customer Can Leverage What They Have, Add-On with Complete Modularity

# # 4 – The Rise of Conversational Voice

- Use of Voice Beyond Order Picking
- Starts with Metrics and Status Update
- Evolved to more Full Blown Dialog

# Will be the Primary Way Users Interact with the WMS

***“I need a replenishment for Location CD05N2.”***

***“Where are we on the last wave?”***

# # 5 – The Integration of WMS and WES

- Warehouse Execution Systems (WES) Move Beyond Current Applications in Heavily Automated DCs
- Rise of the Warehouse Management and Execution System
- Simulation, Optimization and Orchestration
- Step Change in WMS Capabilities
- Headed to the New Era of the “Autonomous WMS”

# How We Got Here

**WMS**

**WCS**

# Some Implementations

## Why?

- Lack of WMS Capabilities
- MHA Vendor in Control of Customer
- Agreements between WMS and WCS Vendor

# New Dynamic in Some Scenarios

**WMS**

**WES**

**WCS**

## Why?

- WES only Developed Due to Perceived Shortcomings in WMS
- True for Some, not for All
- Visibility to Process/Work Area Status
- Flow of Work Based on Capacities and Work Load
- “Waveless” Processing

# WES Addresses Common Distribution Problems/Opportunities

- Lack of Granular Visibility to Throughput and Order Execution
- Labor Planning Challenges
  - Right Resources not in Right Place at Right Time
- Time/Cost/Approach of Adding Technologies (e.g., Picking Sub-Systems)
- Sub-Optimal Picking Execution
- Difficulty Meeting Carrier Cut Off Times/Ensuring SLAs
- High Variability in Materials Handling Equipment Utilization
- WMS Still Highly Reliant on Human Decision-Making

# Fundamental New WES Value Proposition

- Enables Companies to Meet Customer Demand and Service Commitments at the Least Possible Cost
- Significantly Shrinks the Gap Between Theoretic and Realized DC/System Throughput
- Single System for Management and Control of Fulfillment Across the DC
- Integrated with WMS for Complete Solution
- Automated, Manual or Hybrid DCs

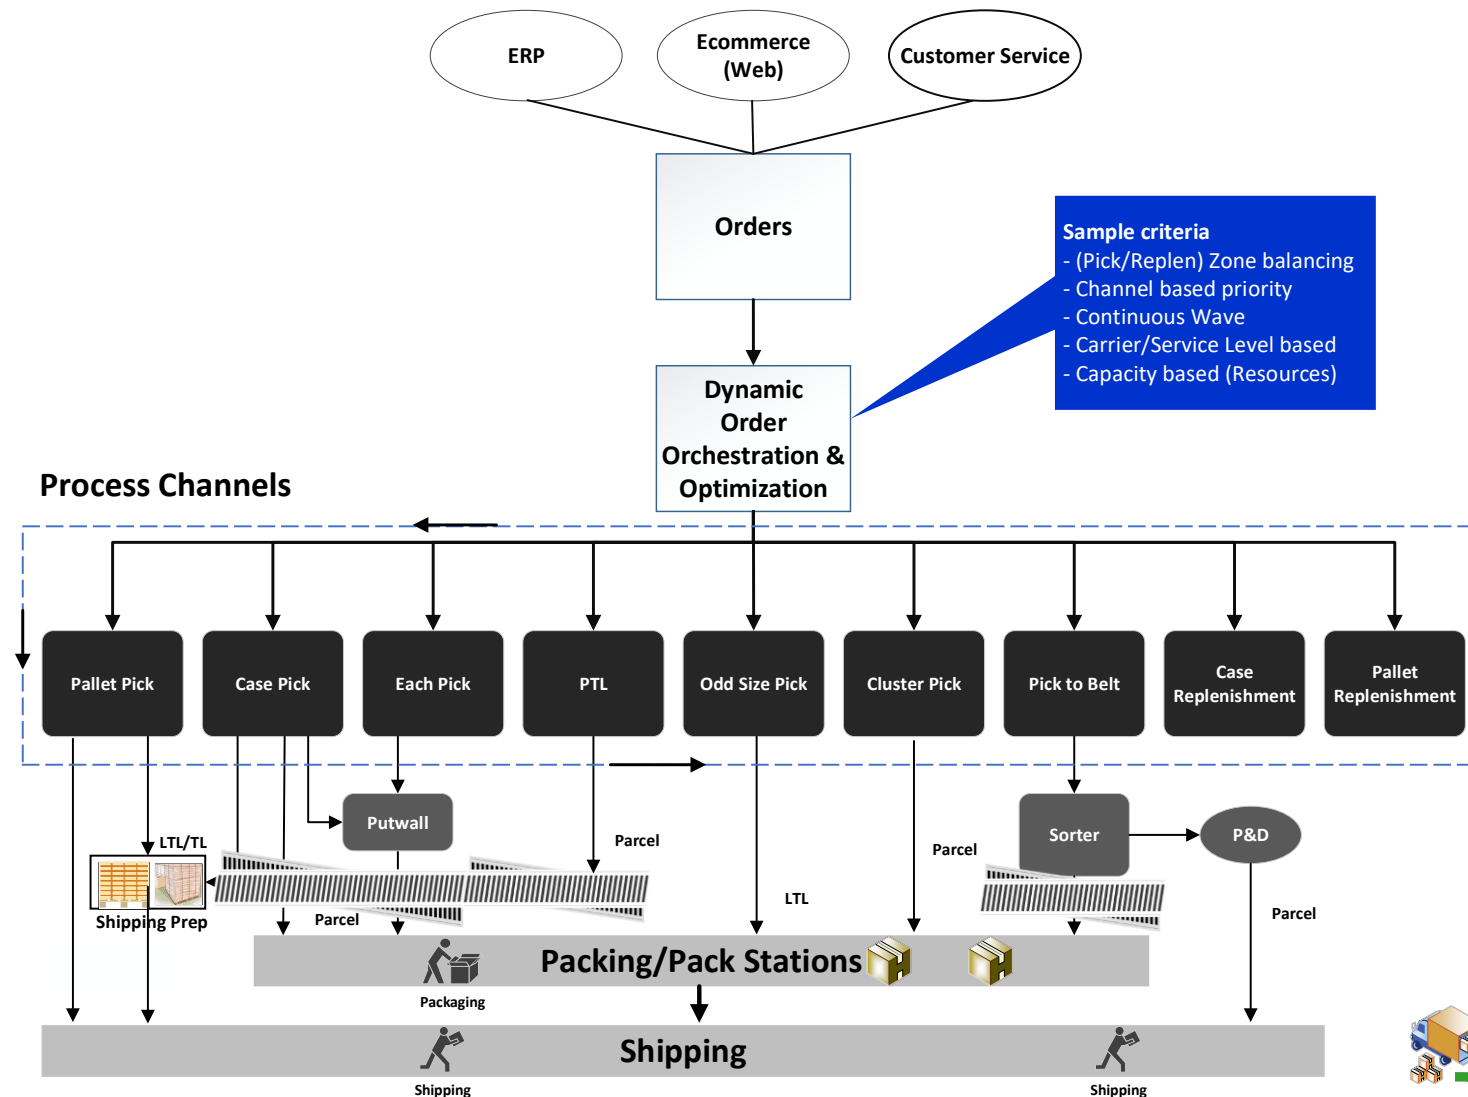

# How WES Delivers Results

- Real-Time Visibility to Throughput, Bottlenecks and Events
- Direct Management and Optimization of Picking Sub-Systems
- Advanced, Configurable Optimization for Order Batching, Release, Picking and Replenishment
- Workload Balancing to Maximize Equipment Utilization and Flow
- Automated Order Release Based on Service Commitment, Shipping Schedules and Real-Time Condition Monitoring
- Use of Simulation to Plan, Re-plan and Allocate Resources

# Dynamic “Aware” Pick Release Management

**Condition and Event Monitor**

**Advanced Scheduler**

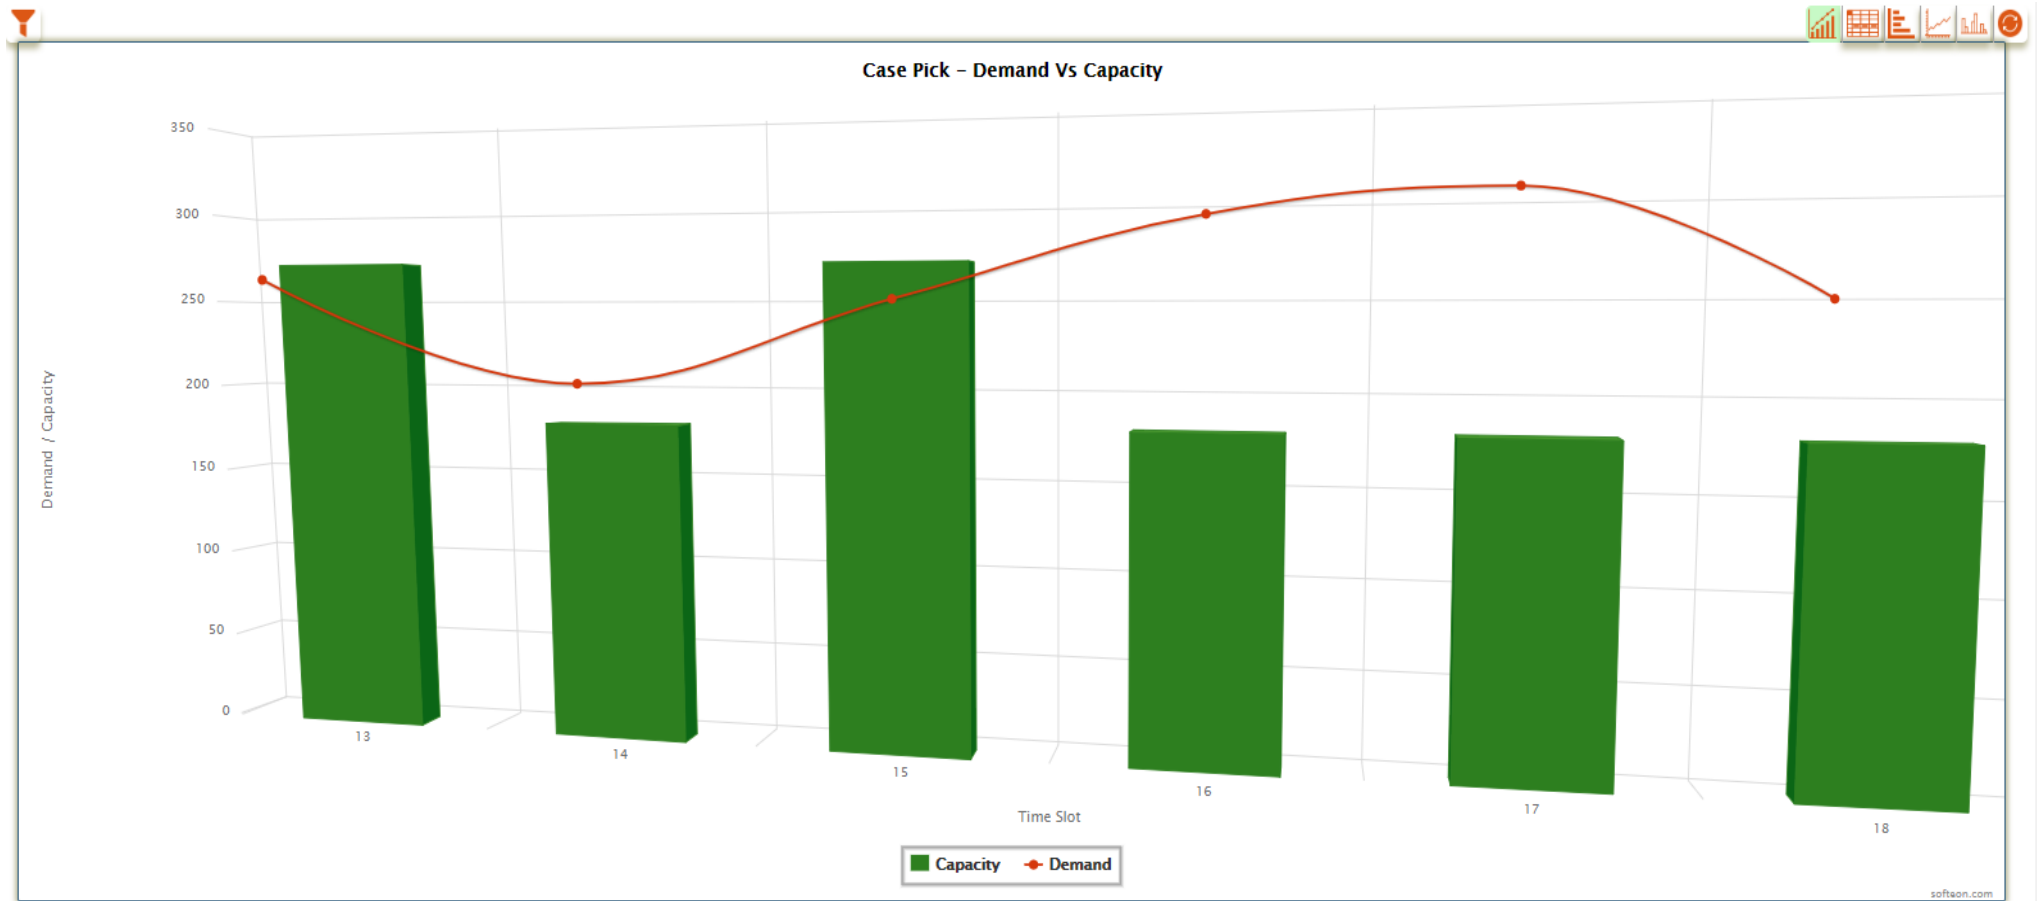

**POWERED BY POSSIBILITIES.**

# Demand v/s Capacity Dashboard from Simulation

# Dynamic Capacity Management Using Simulation

# Benefits of Next-Generation WES

- Double Digit Improvement in Labor Productivity
- Significant Reduction in Supervisory Overhead
- Reduced/Better Managed Overtime
- Improved Throughput
  - Closing Gap between Theoretic and Actual Throughput of a Facility
- Easily and Quickly Evaluate and Deploy New Sub-Systems/Technologies
- Consistently Meet Service Commitment with Little “Chaos”
- Improve MHE Utilization
  - Additional Throughput or Reduce Required Capacity

**Benefits Applicable to Automated, Manual and Hybrid DCs!**

# Where We Are Headed

- **Beginning of an Era of Autonomous Warehouse Software**

- Automated Decision-Making
- Self-tuning (in part through use of AI/ML)

- **Advanced Focus on Product and Process Flow**

- Reduce/Eliminate Process Bottlenecks and Dwell Times
- Flow Distribution™
